ABOUT

Hi, my name's Liz and I'm a software developer based in Toronto, specializing in JavaScript and React. I am dedicated to writing elegant code, and composing responsive, accessible, and performant sites. I love the limitless possibilities for learning, connecting and creating that comes with development. I'm looking to join a team that fosters these values through mentorship and opportunities for professional development.

EXPERIENCE

FREELANCE DEVELOPER

Self Employed | October 2019 - Present

I develop websites from scratch using Gatsby, Netlify CMS, React, GraphQL, SCSS and Styled Components. I implement client wireframes with care and manage projects using Github and Asana. Most recently, I created an progressive web app to pair with an exhibit at a National Gallery. In addition, I mentor and review projects for the part-time Accelerated Web Development Course at Juno College of Technology.

FRONT-END DEVELOPER

Tennis Design | September 2018 - October 2019

Using JavaScript, jQuery, CSS, HTML, Django templating and Git, I developed websites for major education, arts, science, technology and business organizations. It was vital in my role to keep up to date with innovative web technologies, web design trends, and best practices in backwards compatibility, responsiveness and accessibility. With this knowledge, I worked with designers and a back-end developer to scope, refine and implement wire-frames, data structures and Invision prototypes, as well as create actionable design revision. In addition, I participated in internal strategies and exercises to facilitate the development of new workflows.

MENTOR

Canada Learning Code & HackerYou | April 2018 - present

I empower budding developers to feel a sense of belonging and excitement about tech, and help them build web projects. I actively engage with students to try to understand what is causing difficulty in their comprehension and help them discover a solution in creative, resourceful ways.

EDUCATION

SOFTWARE DEVELOPMENT

Bridge | Oct 2019 - Dec 2019

Advanced software development program teaching ES6, React, Redux, Test-Driven Development, Git Flow, Agile development and leadership skills.

IMMERSIVE WEB DEV BOOTCAMP

HackerYou | Apr 2018 - June 2018

Intensive 9-week program that focuses on refining JavaScript, React, CSS, and HTML skills through hands-on project-based learning.

UNIVERSITY OF KING'S COLLEGE

Dalhousie | Sept 2013- May 2017

Bachelor of Arts with first class honours in Contemporary Studies and Sociology.

FEATURED WORK

REACT / FIREBASE / NODE

Bridge Applications App

Admin can access all previous cohort application forms and add new forms. Perspective students can fill out and submit open forms.

REACT / GATSBY / GRAPHQL

Textile Museum of Canada Exhibit

Admin can add object pages and create multimedia hotspots that users can click to learn more about exhibition pieces.

JAVASCRIPT

Factor Annual Report

Users can select and continuously stream music on the site's audio player as they navigate through artists.
